RE: Tentative Adoption of 2024 Management Measures for Analysis

I have been fishing the Mendocino coastal waters for the last 35 years. My vote is option 1. and would like to see the harvest split from Point Arena 50/50. I Just have to say that last summer while fishing for rock fish in 50 fathoms of water I had never seen so many king salmon, at times we had to move because we couldnt drop our linet to the bottom. Im sure these fish were the Mokelumne fish, not counted, complicated.
